

Dear Doctor,

Thanks for taking time to review our vaccination and blood test protocol. If you're not familiar with us, we are a boarding facility exclusively for felines. Owners have the opportunity to let their kitties spend their stay with us in one of our Cage Free Group Playrooms, or in one of the Private Suites, where cats do not interact. In each case we have different vaccination and blood test requirements.

All cats staying with us must have a current FVRCP vaccine (or titer test).

Cats staying in GROUP ROOMS are required to have a blood test for FeLV and FIV within the past 12 months. In order to protect the cats that have been entrusted to our care we need to make sure the cats they are interacting with are healthy. We realize that many cats are not vaccinated for FIV because of the sarcoma risk. We require the FIV test, NOT THE VACCINE.

Please help us support our clients and their cats by confirming that the bloodtests for FIV and FeLV are done for any cat that intends to board in one of our Group Playrooms. Many of the veterinarians with whom we share clients perform the combo test as part of cat's the annual exam. This ensures that the cat is always ready to board in a Group Playroom without the stress of having to make a last minute appointment for blood tests.

Thank You,

The Best Little Cat House
